

# How do I get the required training accomplished?

OSHA Training Requirements  
DOT Training Requirements  
EPA Training Requirements  
Other (SafeLand/RigPass/SafeGulf)

**OPERATOR**  
Training Requirement & Reporting

**No** **Excuses** **SafetyPoints**

Training Completion Program

Presentation Assumption:

*You Know you Have to Train...*

*You know the Benefits of  
Training...*

**Our Focus:**

*Always* **“Get’er  
Done!”**

# Classroom

## Advantages

- **Instructor-led classroom training is an efficient method for presenting a large body of material to large or small groups of employees.**
- It is a personal, face-to-face type of training as opposed to computer-based training and other methods we will discuss later.
- It ensures that everyone gets the same information at the same time.
- **It is cost-effective, especially when not outsourced to guest speakers.**
- Storytelling grabs people's attention.

## Disadvantages

- Sometimes it is not interactive.
- **Too much of the success of the training depends on the effectiveness of the lecturer.**
- Scheduling classroom sessions for large numbers of trainees can be difficult—especially when trainees are at multiple locations.

# Electronic-CBT

TEXT, CD-  
ROM,  
Multi-  
Media

## Advantages

- Computer-based training programs are easy to use.
- **They can often be customized or custom designed.**
- They are good for helping employees develop and practice new skills.
- **They are useful for refresher training.** They are applicable to self-directed learning.
- They can be cost-effective because the same equipment and program can be used by large numbers of employees.
- **They are flexible because trainees can learn at their own pace and at a time that's convenient for them. Computer-based programs are available 24 hours a day, 7 days a week. No matter which shift an employee works, training is always available.**
- Some programs are interactive, requiring trainees to answer questions, make choices, and experience the consequences of those choices. This interaction generally results in greater comprehension and retention.
- They are uniform, which makes it possible to standardize training.
- **They are measurable.** When computers are used for training, it is possible to track what each employee has learned right on the computer. Most programs have post-tests to determine whether the employee has understood the training. Test scores give trainers statistics for training evaluations.

# Electronic-CBT

TEXT, CD-  
ROM,  
Multi-  
Media

## Disadvantages

- **These programs require trainees to be computer literate.**
- They require trainees to have computer access.
- There is little or no interaction with a trainer; if trainees have questions, there's no one to ask.
- **These programs are not effective at teaching “soft-skills,” such as customer service, sales, or sensitivity training.**
- **They are not the best choice for new or one-time training.** Trainers need live interaction to ensure new skills or concepts are being communicated. Trainees need to be able to ask questions and receive feedback.
- Some poorly designed programs are “boring” and result in trainees having a poor retention rate of the material as well as a low finish rate.

# Electronic-online

## Advantages

- Online or e-learning programs are effective for training across multiple locations.
- **They save the company money on travel expenses.**
- They can be a less expensive way to get training from expert industry professionals and consultants from outside the company.
- They are useful for refresher training.
- They are good for self-directed learning.
- **They can be easy to update with new company policies or procedures, federal regulations, and compliance issues.**
- **They offer trainers a growing array of choices for matching training programs to employee knowledge and skill levels.**

# Electronic-online

## Disadvantages

- These programs require trainees to be computer literate.
- **They are usually generic and not customized to your company's needs.**
- Some employees may not like the impersonal nature of this training.
- **Employees may be too intimidated by the technology or the remoteness of the trainer to ask questions.**
- Lack of computer terminals or insufficient online time may restrict or preclude access to training.
- Inadequate or outdated hardware devices (e.g., sound cards, graphics accelerators, and local area networks) can cause programs to malfunction.
- **Your company's Internet servers may not have enough bandwidth to receive the materials.**
- Self-instruction offers limited opportunities to receive context-specific expert advice or timely response to questions

# Blended Training

**Blended learning** is a form of education that combines face-to-face classroom methods with [computer-mediated activities](#).<sup>[1]</sup>

According to its proponents, the strategy creates a more integrated approach for both instructors and students.

# Blended Training-Implemented

## Classroom

Implement for :

- En-mass training to get quick results
- Mass Hiring
- Company & worksite specific training
- Sensitive training topics
- New Hire Orientation (putting a face on safety)
- Infrastructure does not allow other methods

## CBT

Implement for :

- New hires (1-3) on probationary periods
- Static training sites
- Infrastructure does not allow other methods

## Online

Implement for :

- Logistics problems
- Use for Annual training
- Quick access to new training needs

***Which Do you use?***

**BEST PRACTICE-USE ALL**

# Real World

**But We Live in the Real  
World**

**Effects Bottom Line**

# Real World Economics

Assumption: We will use the \$781 Column as the average cost per employee for compliance training.

Your costs are probably higher due to Operator requirements which go beyond just compliance training.

# Employees	Cost per employee	Average Cost
5	\$781	\$3905
10	\$781	\$7810
25	\$781	\$19525
50	\$781	\$39050
100	\$781	\$78100
200	\$781	\$156200
500	\$781	\$390500

**What do you think your cost is...calculate below....**

# of employees \_\_\_\_\_ X \_\_\_\_\_ (AMT) = \_\_\_\_\_ (Cost)

# Question....

*If you could train all your employees for FREE on these topics... WOULD YOU?*

Provider

# About CDP Inc.

In the 1970's, our founder was crippled in a mining accident. His job training for the job consisted of 45 minutes of instruction how to drive a TEREX rock truck fully loaded up and down a mountain. The training was inadequate and he is paying the consequences for the rest of his life. He understands that an injured employee and his employer are not the only ones affected by an incident. Entire families are affected, many times for generations. That's why we are in this business, to make training available (and affordable) for anyone to assist in preventing injuries at work or home.

**These are not words without substance for CDP offers its training courses and packages for FREE; just go to [www.opensourcesafety.com](http://www.opensourcesafety.com) .**

## Safety Training...A Tool for LIFE.

We appreciate your business and that's why we want to talk to you in person to make sure you use the right solution.

If we know of a better solution...even if it means losing business, we will tell you.

We are here to assist, inform, educate and guide you.

**Corporate social responsibility (CSR)**, is a form of corporate self-regulation integrated into our business model. CSR policy functions as a built-in, self-regulating mechanism whereby we monitor and ensure active compliance within the spirit of the law, ethical standards, and international norms. CSR is a process with the aim to embrace responsibility for our company's actions to encourage a positive impact through its activities on the environment, consumers, employees, communities, stakeholders and all other members of the public sphere who may also be considered as stakeholders.

**Simply put...It's the "Right Thing to Do".**
